

ADR-038: Single Mobile App Strategy (PreOne Hub)

Status: LOCKED

Decision

PreOne will use a single universal mobile application named PreOne Hub for Parent, Teacher, Principal, Coordinator, Accounts, HR, Reception, Inventory, Transport, School Owner and limited Super Admin features. Heavy administration remains on the Web Portal.

Architecture

Universal Login → Identity Service → Roles → Assignments → Permission Cache → Dynamic Navigation → Dashboard.

Dynamic Home

Parent: Today, My Child, Attendance, Meals, Photos, Money, Talk, Profile.

Teacher: Today, My Class, Attendance, Observations, Curriculum, Talk, Insights, Me.

Principal: Dashboard, Academics, Teachers, Finance, Reports, Communication, Settings.

Accounts: Fees, Invoices, Receipts, Refunds, Reports.

Inventory: Stock, Purchase, Vendors, Issue, Reports.

Multi-Role Support

A user can hold multiple roles (e.g., Teacher + Parent). Workspace switching changes only navigation and context, not the permission engine.

White-Label Branding

Configurable per school: Logo, App Name, Splash Screen, Login Background, Theme Colors, Optional Font, Icons, Email/SMS Templates, Push Branding.

Hierarchy: Platform Default → Subscription Plan → School Branding → Branch Override.

Technical Implementation

UI is rendered dynamically using User → Roles → Assignments → Permissions → Navigation Configuration → Theme Configuration → Feature Flags.

Final Lock

Mobile: One Universal App (PreOne Hub), Universal Login, Dynamic Role-Based Navigation, Multi-Role Workspace Switching, White-Label Branding.

Web: Single Web Portal for heavy administration with the same RBAC and Permission Engine.
